Model 9800 Sonoma design now available in all 10 stained colors

The Model 9800 Sonoma design shown in walnut. See all color options...

Wayne-Dalton's Model 9800 Sonoma fiberglass-clad garage door is now available in all colors offered across the product line. This includes oak, mahogany, walnut, gray, green, clay, white, Honduran mahogany, and red oak, in addition to the initial introduction color, cherry.

Featuring an authentic replication of real wood, the Model 9800 utilizes fiberglass material for its outer surface, which is made by Therma-Tru, the nation's preferred brand of fiberglass exterior door systems. Its AccuGrain? technology provides a superior graining process that when combined with high-performance garage door construction, produces a natural-looking wood texture, pattern, and appearance. The Sonoma design itself is proving to be one of the most popular in garage doors.

Dave Osso, Wayne-Dalton Brand Manager noted, "The Sonoma design has an appeal all its own, and many customers were asking to get the 9800 Sonoma in colors other than cherry. We were only happy to oblige. The ingrained details of the 9800 fiberglass skin, combined with the Sonoma design and our 10 color offerings, is a fantastic combination that's hard to beat if you're looking for more than an ordinary garage door."

The Model 9800, which has an R-value of 7.6 and features a pinch resistant design, also comes in horizontal, vertical, and V-groove panels.
