Technology that Combines Color and Design Like Never Before!

The new Cherry Sonoma is an exciting extension of the fabulous designs and colors of the Model 9800 line-up.

Featuring an authentic replication of real cherry wood, the Model 9800 is the first garage door to showcase this stunning type of “woodgrain” utilizing fiberglass material. The door’s outer surface is made by Therma-Tru, the nation’s leading manufacturer and most preferred brand of fiberglass exterior door systems. The Sonoma design is one of the most popular in garage doors.

Wayne-Dalton created the industry’s first fiberglass-clad garage door, the Model 9800, with Therma-Tru’s AccuGrain® technology. AccuGrain’s superior graining process, combined with high-performance garage door construction, produces a natural-looking wood texture, pattern, and appearance.

Currently, the Sonoma is available in cherry only. The Model 9800 also comes in horizontal, vertical, and V-groove designs. Other stain colors include oak, walnut, mahogany, red oak, Honduran mahogany, white, green, gray, and clay. (See separate 9800 brochure for details about other designs and colors.)
