Residential Garage Doors

Model 9800, Sonoma panel, Gray finish, 6 Lite Square windows, Decorative hardware
Wayne Dalton

Founded in 1954 in the heart of Ohio by Emmanuel Mullet, Wayne Dalton was built on a dedication to quality wood doors, ingenuity, and customer service. Today, Wayne Dalton continues to offer industry-leading and award-winning garage door innovation alongside one of the largest residential garage door lineups in the industry. With an extensive array of panel designs, window options and colors to choose from, Wayne Dalton garage doors can complement virtually any architectural design.
A new garage door not only improves your home’s curb appeal, it functions as one of your home's most used entry points. Made with care and quality, Wayne Dalton® garage doors offer a variety of performance and safety features.

**Warranty**
All Wayne Dalton garage doors are made with superior materials and come with a Limited Warranty.

**Insulation**
An insulated garage door can help in controlling the temperature in your garage space. The effectiveness of insulation is expressed as an R-value*(R). The higher the R-value, the better the insulation in the door. Wayne Dalton offers two types of insulation in our garage doors.

*Polystyrene Insulation* — A rigid panel of insulation placed inside the door section, with a maximum R-value of 7.4.

*Polyurethane Insulation* — Foamed-in-place polyurethane insulation delivers twice the thermal performance of polystyrene insulation, as well as adds strength to the door and helps dampen sound transmission. R-values range from 9 to 16.22.

**Pinch-Resistant Panels**
Select Wayne Dalton models feature pinch-resistant panels, designed to push fingers out of harm’s way if accidentally placed near a closing door.

**Tight Tongue-and-Groove Joint Seals**
Select Wayne Dalton models include snug-fitting tongue-and-groove joint seals that help reduce wind and weather from entering the garage.

*Wayne Dalton uses a calculated door section R-value for our insulated doors.*

---

### GARAGE DOOR FEATURES AND OPTIONS

**TorqueMaster® Plus Counterbalance System**
Wayne Dalton’s exclusive counterbalance system safely and cleanly contains the garage door springs inside a steel tube. The TorqueMaster® Plus is designed to provide a safeguard against damage or injury that could result from the accidental release of spring tension and features an anti-drop safety device.

**TruChoice® Custom Color System**
With more than 6,000 colors to choose from, there have never been more choices to coordinate your garage door with your home! This state-of-the-art system uses a multi-step process that mixes each custom color and then bakes the color on for a top-quality factory finish.

**Bottom Weather Seal**
All Wayne Dalton garage doors feature a vinyl bottom weather seal to help keep drafts and debris from entering the garage.

**WindSafe® Wind Load Options**
Most Wayne Dalton garage doors offer wind load options that comply with one or more of the following agencies: Florida Building Code, Texas Department of Insurance and Miami-Dade County (FL).

**Impact Wind Load Options**
Select Wayne Dalton garage doors have been approved for impact resistance. Tests show these doors are capable of stopping the direct impact of a 9 lb. 2x4 board at 50 ft. per second.

*Actual colors may vary from brochure due to fluctuations in the printing process. Always request a color sample from your Dealer for accurate color matching.*
Traditional Style
These timeless garage door designs coordinate with any style of home and are available in an assortment of trendy colors and window options. From uninsulated, one-layer construction to our most thermally efficient garage door, the Classic Steel Collection offers a door for every budget and home.

Model 8300/8500, Sonoma panel, Walnut finish, Stockton III windows, Decorative hardware
