Built for performance and affordability, Models 9100 and 9605 offer robust features with a variety of options at affordable prices, adding style and curb appeal to your home.

These doors are chosen by homeowners for their insulating value, durability, style and safety features.

**PERFORMANCE FEATURES**

**TorqueMaster® Plus Counterbalance**  
is the first counterbalance system to seal springs safely within a steel tube. It contains an anti-drop feature that reduces the risk of door free fall.

**Tamper-Resistant Safety Bottom Brackets**  
help avoid possible injury by preventing inadvertent loosening when the counterbalance cables are still under tension.

**Pinch-Resistant Door Panels**  
are engineered with pinch-resistant design to prevent finger injuries while the door is closing.

**High Cycle Spring Option**  
Choose a 25,000 cycle spring for almost twice the life of a standard torsion spring.

**Horizontal Integral Struts**  
at the top and bottom of door sections adds rigidity and strength for long life and smooth operation.

**Thermal Efficiency**  
Foamed in place polyurethane insulation* can improve your home’s thermal efficiency, reduce street noise and make the door operate more quietly.

**Structural Reinforcements**  

**Warranty**  
Limited Lifetime Warranty against cracking or splitting due to rust-through and against degradation of the foam insulation. See full warranty for complete details.

*Polyurethane insulation provides superior insulation value and thermal efficiency compared to polystyrene.
