Wayne Dalton Amps Up Model 882 and 883 ADV-Xtreme Doors with Expanded Performance and Fabric Options

Model 882 and 883 ADV-Xtreme high speed fabric doors are more durable than ever, ideal for manufacturing, warehouse and distribution facilities

May 17, 2021 - Wayne Dalton®, a leading manufacturer of residential and commercial door solutions, has introduced new offerings for Model 882 and 883 ADV-Xtreme doors to provide consumers with extended upgrade and design options that can suit a wider variety of applications. Model 882 ADV-Xtreme now offers an alternative sloped hood and non-drive end cover option that can satisfy exterior applications. The exterior high-speed, high-performance fabric Model 883 ADV-Xtreme has been upgraded to provide an enhanced wind load, higher speed, can accommodate larger sizes broadening the reach of this product solution.

“As we continue to create innovative, technologically savvy advancements for our commercial ADV-Xtreme doors, we want to make sure we’re integrating those upgrades across our entire product lines wherever we can,” Jennifer Castro, Senior Product Manager. “Keeping our customer and installer needs top of mind, these enhancements were designed for improved interaction and to widen our offerings to more applications than ever before.”

Prior to the upgraded fabric option, Model 882 ADV-Xtreme was only suitable for interior applications. Now, the door can accommodate exterior use and features a strutted design that allows for quick section replacement while reducing curtain deflection under pressure and minimal interruption for maintenance, along with a patent-pending breakaway system design with impact detection and push button self-repair.

These offerings provide customers and installers with new safety and security enhancements including wind load options available to withstand pressure up to +19.5 psf, an

increase in the maximum width and height to 20 feet, a new guide and headplate geometry and an increase in speed. In addition, Model 883 ADV-Xtreme offers a standard hood that blocks moisture and debris from impeding door operation, a direct-mounted gear drive to minimize wear and tear, a patent-pending breakaway tab to provide impact protection while raising the door and more.

Both models still feature all of the same benefits of the ADV-Xtreme product platform such as the Wayne Dalton five-year limited warranty, universal handling, quick installation, flexible controls and LED compatibility. Ideal applications include high cycle or high traffic areas such as public and government buildings, parking garages, auto dealerships, warehouses, industrial manufacturing facilities, shipping and receiving docks, food/beverage facilities, airports and hospitals.
